Abstract

This study aims to examine the picture of the condition of energy management in West Java in the future, which is the result of projections of energy supply needs that will be carried out by the Regional Government concerning current conditions, indicators, and parameters that influence and the vision and mission of regional development. This research method is qualitative with a normative approach. The studies carried out in this research are mainly on Presidential Regulation Number 22 of 2017 concerning the National Energy General Plan and West Java Province Regional Regulation Number 2 of 2019 concerning the West Java Province Regional Energy General Plan. The West Java Regional General Energy Plan elaborates on the results of modeling energy demand and supply for 2015-2050. Which also includes policies, strategies, energy development programs, and activities that refer to the National Energy Policy's targets, with sustainable and environmentally sound principles for creating energy independence and resilience in West Java Province.

Keywords: energy planning; west java; regional energy general plan
