Editor and Reviewer comments:

Reviewer #1:

1. Expansion of Research Objectives: This abstract provides an overview of environmentally sound development environmentally sound development by paying attention to environmental factors. However, it would be better if this research also considered other aspects such Development carried out by a nation must side with the people's interests.
2. Use of Empirical Data: As a descriptive study, it would be better if this article integrated the findings from previous studies with relevant empirical data. Citing the latest research results and actual market data will provide a sound basis to support the claims and arguments presented in the article.
3. Exploring Methodology: This article states that this research is a literature study but does not explain further the methodology used. It is important to explain how the literature was selected, the inclusion and exclusion criteria, and why previous theories and research were selected. This will increase the reader's confidence in the validity of the research.
4. Use of More Specific Keywords: The keywords presented are still too general and not specific enough for the context of this study. It is suggested to consider using more specific keywords that reflect this research's main topic and contribution in the context of Law and Environmental Rule.

I hope you can make improvements as soon as possible and send the revised article again via this email.
