Dear
Editor International Journal of Social Sciences (PEOPLE)

We have read and used scientific articles published in PEOPLE.
The performance of the PEOPLE was excellent, and the published article helped us conduct research and write scientific reports.

I am Elferida Sormin, representing other authors from Universitas Kristen Indonesia, Jakarta, Indonesia.
We have completed a scientific article entitled "***Use of Construction Inquiri Learning Model to Improve the Interest of Learning Students Grade XI SMA Angkasa 2 in Coloid Materials on Organizational Performance.***"

We hope this article can be published in the PEOPLE because exciting findings in the scientific report can become new treasures in science, especially in education sciences.
We are willing to go through the review process following PEOPLE standards.

Best Regards,

Elferida Sormin
Universitas Kristen Indonesia, Jakarta, Indonesia

Dear

Elferida Sormin, et al.
Universitas Kristen Indonesia, Jakarta, Indonesia

The PEOPLE Editorial Board has received the team article.
I appreciate the team's interest in PEOPLE.

The team article will be processed according to the publication standards at PEOPLE.
I beg you to be patient while waiting for the notification from the PEOPLE Editorial Board.

Always check email because the correspondence is only via email.

Best Regards,

Dear

Elferida Sormin, et al.
Universitas Kristen Indonesia, Jakarta, Indonesia

Thank you for submitting the manuscript to PEOPLE.

We have completed our evaluation, and the reviewers recommend reconsidering the manuscript following minor revisions. Please resubmit the revised manuscript by December 10th, 2019, or ask whether an alternate date would be acceptable. We invite you to send it back after addressing the comments below.

When revising the manuscript, consider carefully all issues mentioned in the reviewers' comments: outline every change made in response to their comments and provide suitable explanations for any remarks not addressed. Please also note that the revised submission may need to be reviewed.

To submit a revised manuscript, please log in as an author at this email, and navigate to the "Revision" folder. PEOPLE values team contribution, and I look forward to receiving the revised manuscript.

Editor and reviewer comments:

Reviewer #1:

1. The abstract does a good job in presenting the study's objectives. However, to enhance clarity and alignment with the title, consider explicitly stating how the Construction Inquiry Learning model was applied. Additionally, include a brief mention of colloid materials in the abstract to ensure that the reader immediately connects the study's focus with the title.
2. The statistical results are presented adequately, but the explanation could be more detailed. Provide a concise interpretation of the t-test results, explaining the practical significance of the obtained t-value (54.069). Consider including information on the direction of the effect to give readers a better understanding of the impact of the guided inquiry learning model on student interest.
3. While the abstract provides insights into the positive outcomes, it would be beneficial to include a sentence or two about the study's limitations. Addressing any constraints or potential sources of bias will strengthen the credibility of the research. Moreover, briefly suggest possible avenues for future research related to the topic.
4. Elaborate more on the research design, specifically the rationale behind choosing the post-nontest, pre-nontest method. Discuss how this method aligns with the study's objectives and contributes to the validity of the results. Providing this context will help readers better understand the methodology and its appropriateness for the research question.
5. While the keywords are relevant, consider expanding them to enhance informativeness. For example, specify the type of inquiry learning model used (guided inquiry). This additional detail will assist researchers and educators looking for specific information related to guided inquiry learning and its impact on learning interest in the context of colloid materials at the high school level.

I hope you can make improvements as soon as possible and send the revised article again via this email.
