Posma Sariguna Johnson Kennedy:

We have reached a decision regarding your submission to Acta Scientiarum Polonorum. Oeconomia, "PROBLEMS OF BASIC HEALTH SERVICES IN THE BORDER AREAS OF INDONESIA WITH TIMOR LESTE STATE IN NUSA TENGGARA TIMUR PROVINCE".

Our decision is to: Resubmit for Review

Please send me corrected article by 07.07.2020

mgr Marcin Chciałowski
Faculty of Economic Sciences, Warsaw University of Life Sciences-SGGW

Reviewer C:
Recommendation: Revisions Required

General value of the work.

It brings new values

Methodology

Suitable

Research data

Sufficient

Statistical study

Can be accepted after taking the reviewer's remarks into consideration

Graphical material

Quality and quantity suitable

Tables and figures

Suitable

Research results interpretation

Suitable

Quoted literature

Not complete, important publications missing

Units of measure

Suitable (SI system)

Abstract

Correct

Opinion on the lingual side of the work

Good

COMMENTS

My remarks are the following:

1. The reviewer agrees that 'the role of infrastructure is also a significant physical component for the border region.'
2. The chosen research method is in line with the purpose of the study, although it should be added that the use of composite indicators always has some distorting effects.
3. It would be better to use the English term 'Community Health Centre' instead of 'Puskesmas' in Table 1. (The English term would be also better in case of 'Posyandu')
4. Use 'et al.' instead of 'et.all'.
5. It is worth emphasizing the role of education in healthcare development, with particular attention to prevention. Developing countries' healthcare and education systems should be developed jointly and simultaneously.
6. In Table 3 and 4 it would be recommended to indicate the rates beside the numbers.
7. This sentence should be revised: 'The increase occurred in the percentage of children under five and under five years old wasting and underweight.'
8. The different form of numbers (percent) should be harmonised (e.g. '61.1' instead of '61, 1'): 'From the 2017 data, there are three health problems faced by NTT Province, namely: the high percentage of unhealthy people as much as 64 percent; the percentage of citizens who have not participated in the National Health Insurance (JKN) as much as 60.4 percent; and there are smokers in the family as much as 75.7 percent with the number of hypertension sufferers who take irregular treatment as much as 61, 1 percent.'
9. In Table 7: (2014) 10,323 instead of 10323.
10. Do you have any information on why the number of 'Posyandu' almost halved in 2015? It should be explained.
11. 'Perpres' or 'prepres'? Please check it in text and in references.
12. Please correct the year of the publication in references (it has been published in 2007): Wasis B., Suprpto, Ristrini, 2017. Studi tentang Rekrutmen, Seleksi dan Alokasi Kegiatan Tenaga Keperawatan di Daerah Terpencil di Jatim dan NTT. Badan Penelitian dan Pengembangan Kesehatan: Pusat Penelitian dan Pengembangan Sistem dan
13. The reviewer couldn't find any citations in the text for this publication: Sardjoko, Subandi, 2018. Penguatan Pelayanan Kesehatan Dasar di Puskesmas, Direktorat Kesehatan dan Gizi Masyarakat Kedepuitan Pembangunan Manusia, Masyarakat dan Kebudayaan
14. All in all, we can read an interesting study that summarizes one of the major challenges of our time, the territorial differences in healthcare. The development proposals formulated are relevant not only in Indonesia but also in most developing countries. I sincerely hope that the activities suggested by the author will be implemented.

Reviewer E:

The study deals with the issue of diversifying the level of healthcare services in border areas of Indonesia.

I suggest that the Author take greater care of the clarity of the message. The method of editing the text should be understandable to an international recipient, who does not necessarily have to know the specifics of Indonesia. This applies to, among others explanation of the abbreviations of some program names. Many abbreviations and references appear in the study, which makes it more a report than a scientific article. In this respect it should be improved.

The way data is presented should be significantly improved. There cannot be, for example, the form of several very small tables in succession (e.g. tables 3-5, 9) containing individual data.

It would be worth, for example, to refer to the theory of regional development (theory of the core and periphery) to give the presented results an economic aspect.

The summary should not contain references to literature. This should be Author's own text.

In the bibliography, there are too many reports, and too few scientific articles. It should be changed and improved.

Technical development considerations, e.g. misaligned tables, should be improved.

Recommendation: Revisions Required

Dear Posma Sariguna Johnson Kennedy,

Sorry for taking so long about what to do with your article. The main problem is its length. When properly formatted, it is approximately 24-25 pages long. The page limit in our journal is 12. This text and your research are very important to us. Therefore, I have a proposal that you divide your article into two and publish one in the issue 4/2020 and the other in the issue 1/2021. Of course, the articles would have to have different titles and abstracts. Will you agree to this solution? Attached I am sending a formatted article. If you agree, divide it sensibly into two separate articles.

Best Regards,
Marcin Chciałowski
